RED BULL SPECT EYEWEAR CAPSULE COLLECTION

The Red Bull SPECT Eyewear capsule collection is made for those who accept challenges, but deny boundaries. The sunglasses and goggles come with a stronger focus on innovative technologies designed to meet the requirements of high-performance athletes.

POLAR'Z

Polarized lenses reduce the effects of glare by reflected light. No matter if you are on snow or water, polarized lenses give you the freedom to enjoy your life outdoors. Contrasts and colours appear more intense. Visual clarity and comfort are increased.

PERFORMANCE EYEWEAR

Endurance sports are demanding in every aspect.
So why not add some comfort?

By detaching the lens from the lower frame, a free floating lens effect is created. The elastic characteristics of the frame allow the lens to freely move up and down while being exposed to movement or shocks.

This is our patented FLOW system.

1

Flexible frame with floating lens for shock absorption, ventilation and comfort

2

Adjustable rubber nose pads and temple tips for secure grip

3

Open frame design to support air flow and reduce weight

4

Fast & easy click system to change lenses

5

Photochromic lenses adapt to all light conditions

6

Robust & lightweight TR90 frame material

WING^{DUAL TEMPLE SYSTEM}

POLAR'Z

INNOVATIVE DUAL TEMPLE SYSTEM FOR HIGH MOVEMENT SPORTS

The patented WING system combines two temple elements in one frame. By moving a small slider on the temple, a second hidden metal wire extends out and wraps around the ear.

The second temple provides secure fit grip during high-level sports activities. Through its curly form, the flexible wire securely hugs the ear.

In the same way as it extends, the wire slides back until it completely disappears inside the temple again – without once removing the frame from the head. The innovative WING system is available in sunglasses and optical frames.

ULTRA-FLEX

ULTRA FLEXIBLE SUNGLASSES FOR ALL ACTIVITIES, TERRAINS AND CONDITIONS

The ultra-flexible frames are made of innovative TPE (Thermo Plastic Elastomers) material. Due to its memory function, the frame jumps right back into form after being bent or twisted and still guarantees best stability.

The antibacterial material resists oil and grease and makes the frame extremely hygienic. Designed for robustness, the ultra-flexible frames even withstand extreme conditions like humidity or draught.

The ULTRA FLEX STYLE is currently available in nine sunglass models.

LENS TECHNOLOGY

DOUBLE LENS

WITH DOUBLE LENS

WITHOUT DOUBLE LENS

FOR A FOG-FREE VISION

Our double lens technology offers two advantages at once – best visibility and increased safety. A cavity forms a thermal barrier between the two lenses of the ski goggles. In this way, the cold outside air and the warm inside air are kept away from each other – which prevents the ski goggle from fogging up. In addition, the double lens offers increased protection in the event of a fall.

PC LENS

WITH POLYCARBONATE

WITHOUT POLYCARBONATE

FOR MAXIMUM PROTECTION

Ski goggles with our break-resistant polycarbonate lenses are particularly robust. Even if the lenses are damaged, the glass does not splinter. Anti-scratch coating limits annoying scratches. Our ski goggles also offer comprehensive UV protection against harmful UV-A and UV-B rays.

CHROM[•]X

ADAPTS TO LIGHT CONDITIONS

Ski goggles featuring our CHROM-X technology react to sunlight and adapt their light transmission in just a fraction of a second. Due to innovative ion technology, the lens reacts to the ultraviolet percentage of sunlight and automatically darkens up to category 3. In this way, you are perfectly equipped for any weather condition and don't need different lenses.

I'BOOST

FOR CONTRAST, SHARPNESS AND BRILLIANCE

Lenses with our I-BOOST technology ensure razor-sharp vision, intense contrasts and brilliant colors. Especially in hazy white areas, they provide a clear view. By enhancing contrasts, they help to recognize details and bumps earlier. Enjoy incomparably vivid colors and clear vision with our I-BOOST lens technology.

WITHOUT **F' SCAPE**

ANTI-FOG TECHNOLOGY

Ski goggles fog up due to the temperature difference to the cold outside air. Small drops of water form on the surface of the lens and obscure your view. Our innovative F-SCAPE Anti-Fog technology uses tiny micro-etched channels on the lens surface to ensure that condensed water is immediately drained off. The additional hydrophobic coating allows the condensed water to flow into a flat film. Due to the mechanically modified lens surface, F-SCAPE is many times more robust than conventional anti-fog coatings and cannot simply be wiped away.

FREE'D

FOR A CLEAR VISION WITHOUT DISTORTION

Our FREE-D technology corrects light refractions and prevents optical distortion. As soon as light rays pass through a lens, they refract and produce a distorted image. Our FREE-D process ensures that light rays are straightened to produce a realistic image. Especially in winter sports, FREE-D lenses offer a clear advantage, because precise vision can be decisive for both athletic performance and safety on the slopes.

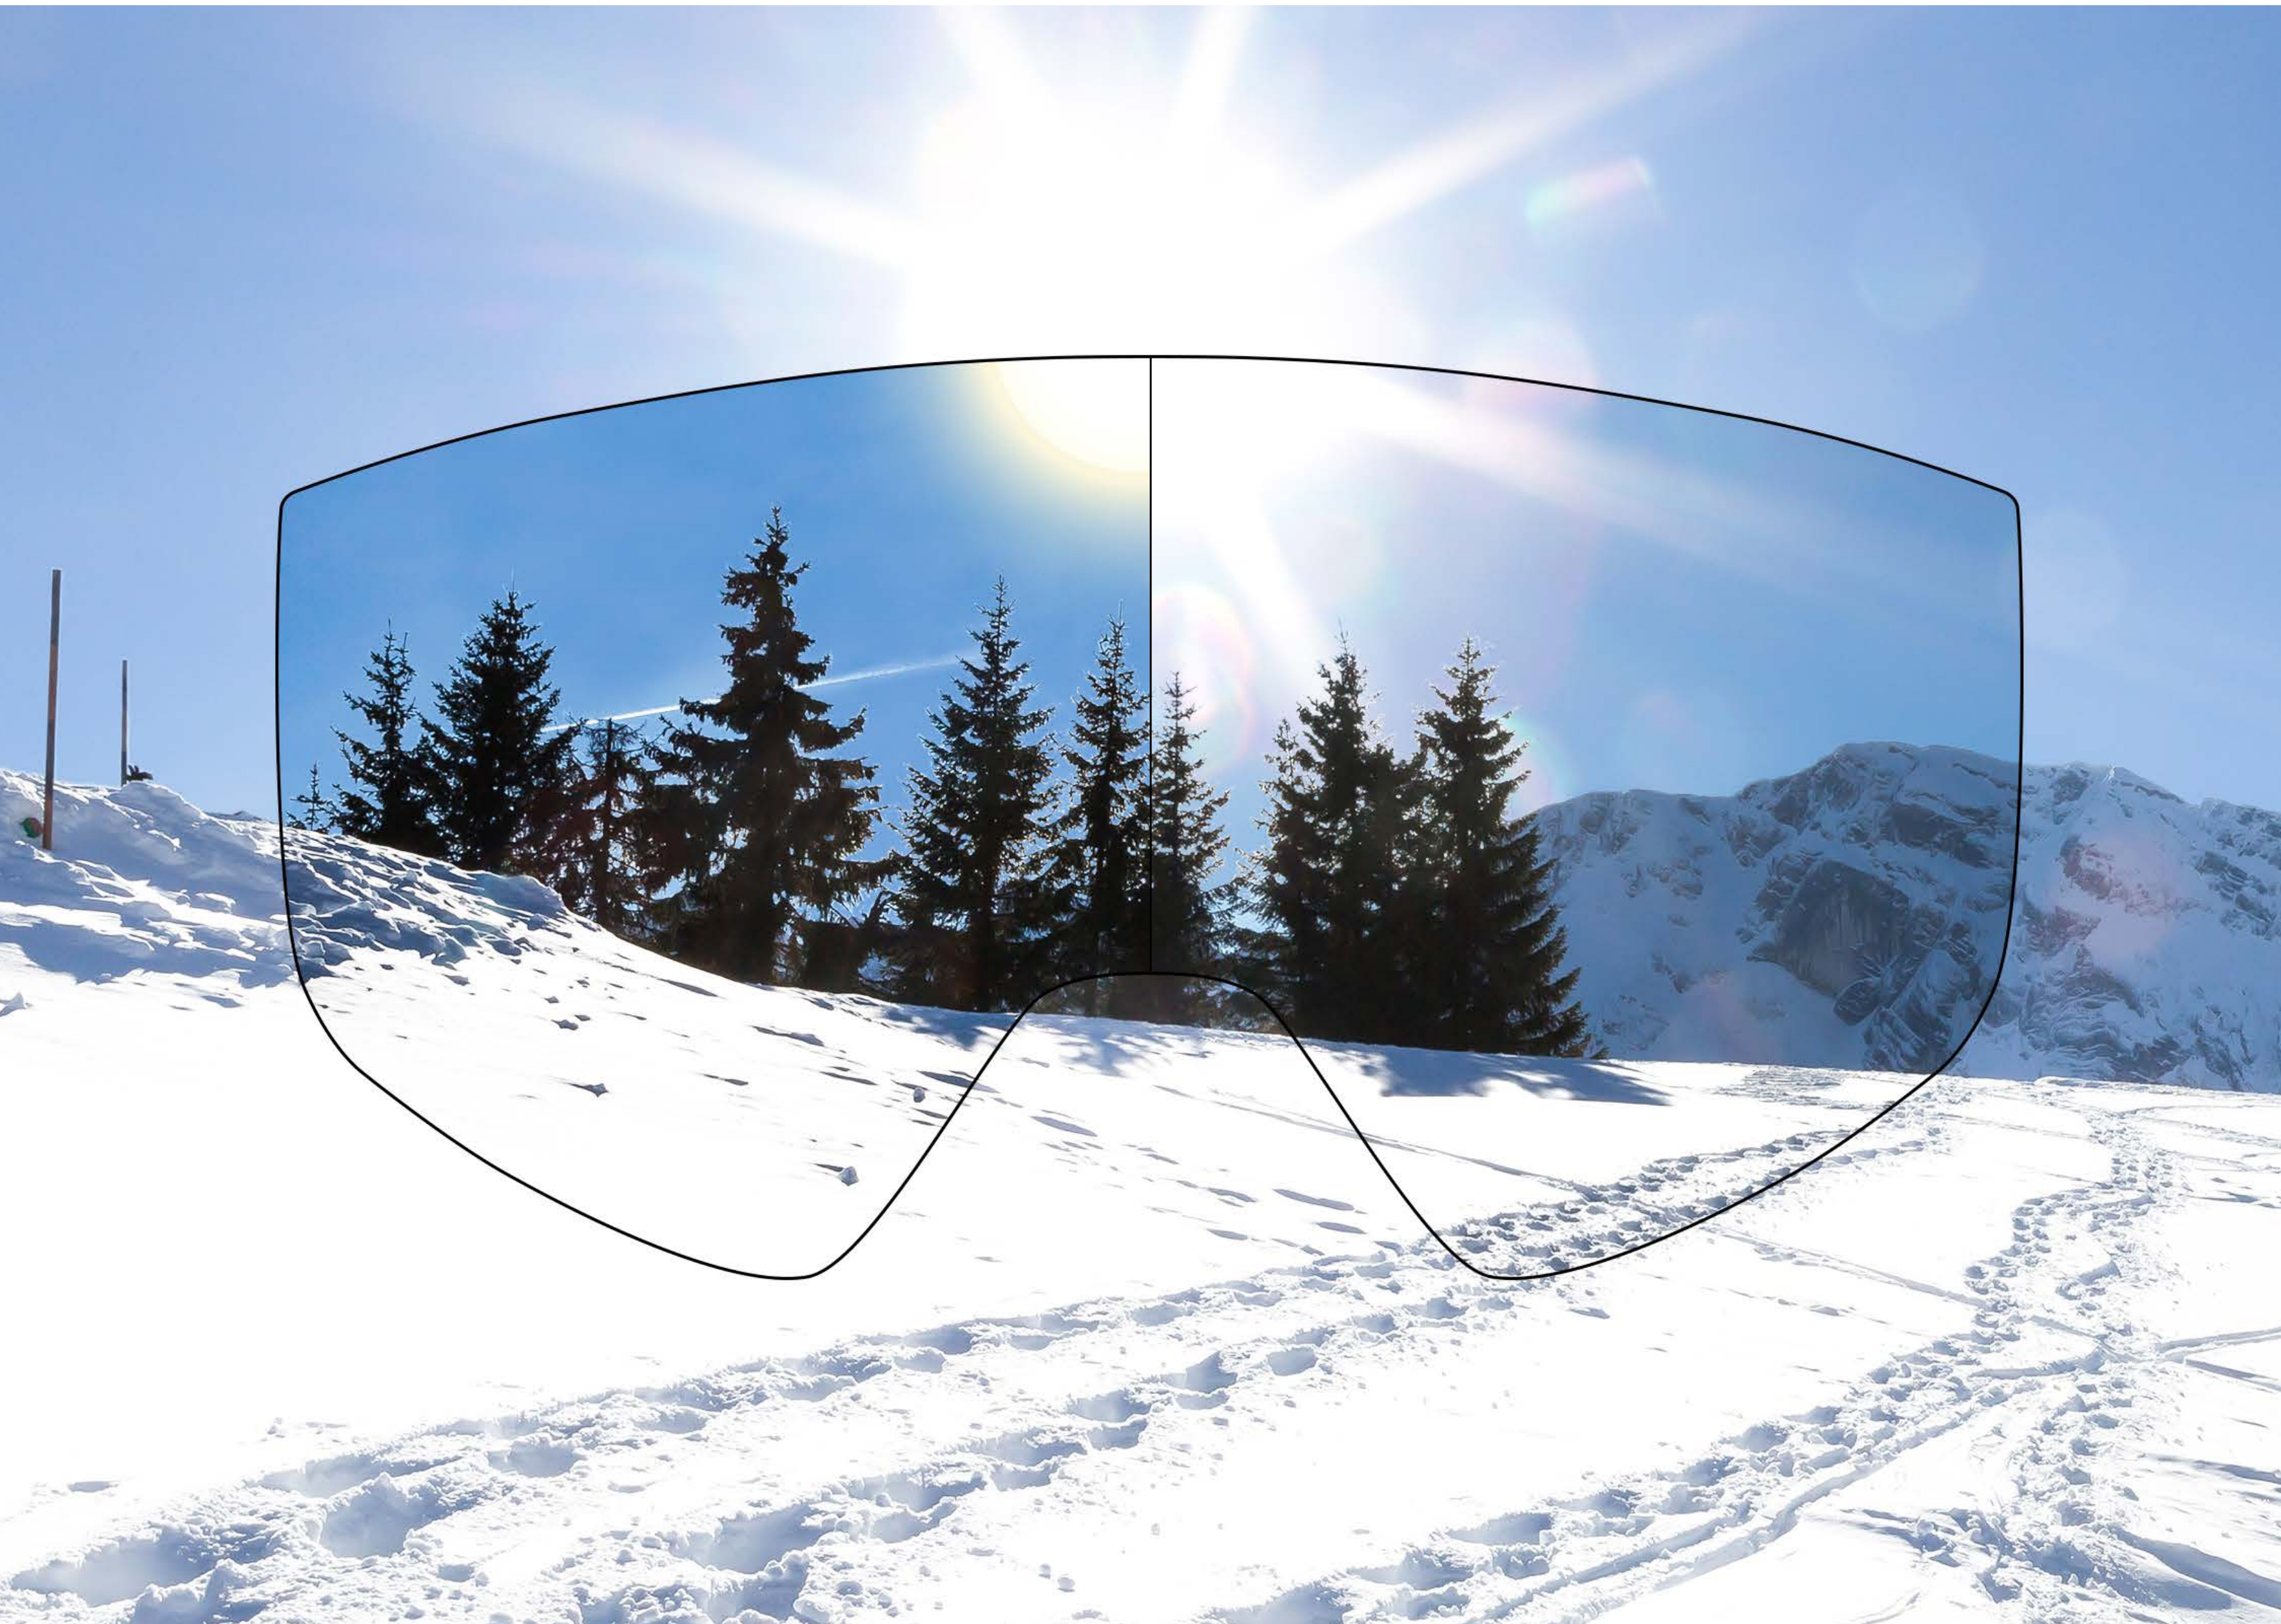

WITH FREE'D

WITHOUT FREE'D

POLAR'Z

FOR A GLARE-FREE VISION

Our polarized sunglasses reduce the negative effects of reflected sunlight. Contrasts and colors are perceived more intensively because the integrated polarization filter absorbs disturbing light reflections. Your vision becomes clearer and sharper, your eyes are less strained. Polarized lenses are therefore particularly advantageous for outdoor sports and road traffic.

WITHOUT POLAR'Z

LENS TECHNOLOGY OVERVIEW

HYDRO
The hydrophobic treatment repels water drops.

ANTI SCR
The anti-scratch treatment increases the scratch-resistance of the lens.

MAGNETRON

QUICK LENS CHANGE SYSTEM FOR EVER-CHANGING WEATHER CONDITIONS

The Magnetron features a quick-change magnetic system making a lens swap faster than ever. Once pulled off, the interchangeable lens clicks right back into place. Extra strong magnets firmly seal the lens to the frame.

The goggle comes with two lenses – one mirrored for good weather and a contrast enhancing and brightening one for bad weather. Anti-fog and anti-scratch technology inside the lens ensure a clear vision. The unique Red Bull Spect branded ventilation system vents warm moist air away from the goggle and prevents fog formation.

The Magnetron Style is available with a cylindrical and a spherical lens.
